

CLAIM AMENDMENTS

Claim Amendment Summary

Claims pending

- At time of the Action: Claims 1-46.
- After this Response: Claims 1-33.

Canceled or Withdrawn claims: 34-46.

Amended claims: none.

New claims: none.

Claims:

1. (ORIGINAL) A method for concealing an information pattern of multiple discrete values within a digital signal, the method comprising:
receiving the information pattern of multiple discrete values;
chessboarding the discrete values of the information pattern to produce chessboarded discrete values.
2. (ORIGINAL) A method as recited in claim 1 further comprising encoding the chessboarded discrete values into the digital signal, wherein such signal is noise in relation to the information pattern.

1 3. (ORIGINAL) A method as recited in claim 1, wherein the
2 chessboarding comprises:

3 pseudorandomly determining whether to change each discrete value of the
4 information pattern, wherein such determining is based upon a pseudorandom
5 number generator (PRNG) and a key;

6 changing each discrete value of the information pattern that the determining
7 indicates should be changed, thereby producing chessboarded discrete values.

8
9 4. (ORIGINAL) A method as recited in claim 1, wherein the
10 chessboarding comprises:

11 pseudorandomly determining whether to change each discrete value of the
12 information pattern, wherein such determining is based upon a look-up table;

13 changing each discrete value of the information pattern that the determining
14 indicates should be changed, thereby producing chessboarded discrete values.

15
16 5. (ORIGINAL) A method as recited in claim 1, wherein the
17 chessboarded discrete values are entropy-balanced.

18
19 6. (ORIGINAL) A method as recited in claim 1, wherein the
20 chessboarded discrete values are absolutely chessboarded.

21
22 7. (ORIGINAL) A method as recited in claim 1, wherein the digital
23 signal is an digital audio signal.

1 8. (ORIGINAL) A computer-readable medium having computer-
2 executable instructions that, when executed by a computer, performs the method
3 as recited in claim 1.

4
5 9. (ORIGINAL) A method for revealing an information pattern of
6 multiple chessboarded discrete values within a digital signal, wherein the
7 chessboarded discrete values correspond to original discrete values of the
8 information pattern before the values were chessboarded, the method comprising:
9 receiving the information pattern of multiple chessboarded discrete values;
10 un-chessboarding the chessboarded discrete values to produce the original
11 values of the information pattern.

12
13 10. (ORIGINAL) A method as recited in claim 9 further comprising
14 detecting the original discrete values encoded in the digital signal, wherein such
15 signal is noise in relation to the information pattern.

16
17 11. (ORIGINAL) A method as recited in claim 9, wherein the un-
18 chessboarding comprises:

19 pseudorandomly determining whether to change each chessboarded discrete
20 value of the information pattern, wherein such determining is based upon a
21 pseudorandom number generator (PRNG) and a key;

22 changing each chessboarded discrete value of the information pattern that
23 the determining indicates should be changed, thereby producing the original
24 discrete values of the information pattern.

12. (ORIGINAL) A method as recited in claim 11, wherein the key of the un-chessboarding is identical to a key used to generate the chessboarded discrete values from the original discrete values.

13. (ORIGINAL) A method as recited in claim 9, wherein the un-chessboarding comprises:

pseudorandomly determining whether to change each chessboarded discrete value of the information pattern, wherein such determining is based upon a look-up table;

changing each chessboarded discrete value of the information pattern that the determining indicates should be changed, thereby producing the original discrete values of the information pattern.

14. (ORIGINAL) A method as recited in claim 9, wherein the chessboarded discrete values are entropy-balanced.

15. (ORIGINAL) A method as recited in claim 9, wherein the chessboarded discrete values are absolutely chessboarded.

16. (ORIGINAL) A method as recited in claim 9, wherein the digital signal is an digital audio signal.

1 17. (ORIGINAL) A computer-readable medium having computer-
2 executable instructions that, when executed by a computer, performs the method
3 as recited in claim 9.

4
5 18. (ORIGINAL) A computer-readable medium having computer-
6 executable instructions that, when executed by a computer, perform a method for
7 concealing an information pattern of multiple discrete values within a digital
8 signal, the method comprising:

9 receiving the information pattern of multiple discrete values;

10 chessboarding the discrete values of the information pattern to produce
11 chessboarded discrete values;

12 encoding the chessboarded discrete values into the digital signal, wherein
13 such signal is noise in relation to the information pattern.

ATTORNEYS AT LAW

1 19. (ORIGINAL) A computer-readable medium having computer-
2 executable instructions that, when executed by a computer, perform a method for
3 revealing an information pattern of multiple chessboarded discrete values within a
4 digital signal, wherein the chessboarded discrete values correspond to original
5 discrete values of the information pattern before the values were chessboarded, the
6 method comprising:

7 receiving the information pattern of multiple chessboarded discrete values;
8 un-chessboarding the chessboarded discrete values to produce the original
9 values of the information pattern;
10 detecting the original discrete values encoded in the digital signal, wherein
11 such signal is noise in relation to the information pattern.

12
13 20. (ORIGINAL) An apparatus comprising:

14 a processor;

15 a chessboarder executable on the processor to:

16 receive an information pattern of multiple discrete values;

17 chessboard the discrete values of the information pattern to produce
18 chessboarded discrete values.

1 21. (ORIGINAL) An apparatus comprising:

2 a processor;

3 an un-chessboarder executable on the processor to:

4 receive an information pattern of multiple chessboarded discrete
5 values;

6 un-chessboard the chessboarded discrete values to produce original
7 values of the information pattern.

8
9 22. (ORIGINAL) An information pattern encoding system for
10 concealing an information pattern of multiple discrete values within a digital
11 signal, wherein such signal is noise in relation to the information pattern, the
12 system comprising:

13 a receiver for receiving the information pattern of multiple discrete values
14 and the digital signal;

15 a chessboarder coupled to such receiver, the chessboarder chessboards the
16 discrete values received from the receiver to produce chessboarded discrete
17 values;

18 an encoder coupled to the receiver and the chessboarder, the encoder inserts
19 the chessboarded discrete values received from the chessboarder into the digital
20 signal received from the receiver.

23. (ORIGINAL) An encoding system as recited in claim 22, wherein the chessboarder comprises:

a pseudorandom number generator (PRNG) for pseudorandomly determining whether to change each discrete value of the information pattern;

a value-adjuster to change each discrete value of the information pattern that the PRNG indicates should be changed, thereby producing chessboarded discrete values.

24. (ORIGINAL) An encoding system as recited in claim 22, wherein the chessboarder comprises:

a look-up table data structure for pseudorandomly determining whether to change each discrete value of the information pattern;

a value-adjuster to change each discrete value of the information pattern that the data structure indicates should be changed, thereby producing chessboarded discrete values.

25. (ORIGINAL) An encoding system as recited in claim 22, wherein the chessboarded discrete values are entropy-balanced.

26. (ORIGINAL) An encoding system as recited in claim 22, wherein the digital signal is a digital audio signal.

27. (ORIGINAL) An operating system comprising an encoding system as recited in claim 22.

28. (ORIGINAL) A marked signal with an information pattern of multiple chessboarded discrete values encoded therein, the marked signal generated in accordance with the following acts:

receiving an information pattern of multiple discrete values and an unmarked signal;

chessboarding the discrete values of the information pattern to produce chessboarded discrete values of the information pattern;

encoding the chessboarded discrete values into the unmarked signal to produce the marked signal, wherein such unmarked signal is noise in relation to the information pattern.

29. (ORIGINAL) A marked signal as recited in claim 28, wherein the chessboarding comprises:

pseudorandomly determining whether to change each discrete value of the information pattern, wherein such determining is based upon a pseudorandom number generator (PRNG) and a key;

changing each discrete value of the information pattern that the determining indicates should be changed, thereby producing chessboarded discrete values.

30. (ORIGINAL) A marked signal as recited in claim 28, wherein the chessboarding comprises:

pseudorandomly determining whether to change each discrete value of the information pattern, wherein such determining is based upon a look-up table;

changing each discrete value of the information pattern that the determining indicates should be changed, thereby producing chessboarded discrete values.
